Allowable Subject Matter

1. Claims 1-26 are allowed.

2. The following is an examiner's statement of reasons for allowance:

In interpreting the claims in light of the Specification and applicants' arguments, the examiner finds the claimed invention patentably distinct from the prior art of record. The prior art of record fails to teach, either alone or in combination, sending a connection data associated with a current connection or with one or more prior connections from a server communications device to a data access device for storage and for subsequent retrieval by the server communications device or another server communications device during a subsequent connection.

The examiner finds applicants' arguments filed September 19, 2005 in response to the non-final Office action of June 16, 2005 to be persuasive. The Applicants argued the APCM and DPCM signals, including a capabilities request signal, a quick connect identifier signal and quick connect acknowledgment signal, are not "connection data" that is sent from the server to a data access device for storage on the data access device for subsequent retrieval by the server for a subsequent connection. See Remarks, page 9, line 22 – page 10, line 13. Applicants further argued the prior art of record fails to explicitly teach transfer of session state data initiated by the server, i.e. a subsequent retrieval by the server or another server previously stored connection data from the data access device. See Remarks, page 11, line 26 – page 12, line 9.
